

Customer Shopping Behavior Analysis

1. Project Overview

This project aims to analyze customer shopping behavior using transactional purchase data. The primary objective is to identify patterns in customer spending, understand purchasing preferences, examine subscription behavior, and segment customers based on their shopping habits.

2. Dataset Summary

The dataset contains information related to customer demographics, purchase details, and shopping behavior.

- **Total Records:** 3,900 purchases
- **Total Variables:** 18 columns

Key Features Included in the Dataset

- **Customer Demographics:** Age, Gender, Location, and Subscription Status.
- **Purchase Details:** Item Purchased, Product Category, Purchase Amount, Season of Purchase, Size, and Color.
- **Shopping Behavior:** Discount Applied, Promo Code Used, Number of Previous Purchases, Purchase Frequency, Review Rating, and Shipping Type.

Missing Data

The dataset contains **37 missing values** in the **Review Rating** column, while all other variables are complete.

3. Exploratory Data Analysis Using Python

The dataset was prepared and cleaned using Python through the following steps:

- **Data Loading:** Imported the dataset using pandas.
- **Initial Exploration:** Used `df.info()` to examine the dataset structure and `df.describe()` to generate summary statistics.

- **Missing Data Handling:** Checked for null values and imputed missing values in the Review Rating column using the median rating of each product category.
- **Column Standardization:** Renamed columns to **snake case** for better readability and documentation.
- **Feature Engineering:**
 - Created **age_group** column by binning customer ages.
 - Created **purchase_frequency_days** column from purchase data.
- **Data Consistency Check:** Verified if discount_applied and promo_code_used were redundant; dropped promo_code_used.
- **Download Data:** After cleaning the data download the data into csv file.
